

Capstone Project #2 Ideas

Idea #1: Cholera case fatality in different region

The cholera case has been found in different region. A database regarding to the fatality rate in different region and year has been input in the database. The purpose of this project is to find out the region has more cholera case vs. year and try to predict what will be the next place it will happen.

***Idea #2: heart problem vs. different condition**

People has heart problem. To help them avoid this issue, a project will be proposed by correlation heart problem with different parameter

Idea #3: us-county-covid-19 distribution and prediction

Try to predict the covid-19 distribution in different US county and its tendency. This could provide an useful data during the pandemic situation
